Adult Emergency Medicine at a Glance is: A concise, visually orientated course in emergency medicine that is perfect for both study and revision Organised around symptoms: 'Short of Breath', rather than diagnoses: 'Pneumonia' Focused on the most common or dangerous conditions you will see in the Emergency Department and includes the latest cardiac resuscitation guidelines Comprehensively illustrated throughout with over 47 full-page colour illustrations.

**AGED**

**Ageing, health, and care** / [by] Christina R. Victor.  
The ageing of the population has enormous policy implications for the provision of, and access to, health care. People aged 65+ are the major consumers of the health care system accounting for about half of all NHS resources. Furthermore those aged 85+ represent 1 percent of the population but consume 10 percent of all health-care resources. Christina Victor’s important new textbook provides: a comprehensive overview of the health status and experiences of older people; chapters on physical health, mental health, disability, and lifestyle; a synthesis of current policy developments relating to health and social care for older people; an examination of the key debates concerning the health of future cohorts of elders; and, an international, up-to-date perspective. Written by a leader in the field, the book covers key questions such as the fitness of older people in the future, the widening inequalities in the health of older people and the extent to which health in old age reflects habits and behaviour in earlier life.

Elderly Care Medicine Lecture Notes provides all the necessary information, within one short volume, for a sound introduction to the particular characteristics and needs of elderly patients. Presented in a user-friendly format, combining readability with high-quality illustrations, this eighth edition has been thoroughly revised to reflect advances in knowledge on how disease presents in elderly people, and changes in management practice, particularly regarding stroke, dementia, delirium, and cancer. New for this edition, Elderly Care Medicine Lecture Notes also features: More treatment tables and boxes throughout for rapid access and revision. Expansion of material on polypharmacy and prescribing. Discussion of emotional support, counselling and spirituality. Advice for doctors on breaking bad news and end-of-life care. Consideration of ethical and legal issues. A companion website at www.lecturenoteselderlycaremed.com features appendices which can be used as guidelines in a clinical setting, key revision points for each chapter, further reading suggestions, and extended content for specialty training in geriatrics. Not only is this book a great starting point to support initial teaching on the topic, but it is also easy to dip in and out of for reference or revision at the end of a module, rotation or final exams. Whether you need to develop or refresh your knowledge of geriatrics, Elderly Care Medicine Lecture Notes presents ‘need to know’ information for all those involved in treating elderly people.

**AGEING**

Popular with generations of practitioners, ‘Brocklehurst’s Textbook of Geriatric Medicine and Gerontology’ has been the definitive reference of choice in the field of geriatric care. The new 7th Edition, by Howard M. Fillit, MD, Kenneth Rockwood, MD, and Kenneth Woodhouse, carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population. It includes consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more that make reference quick and easy, while nearly 1,000 illustrations compliment the text to help you find what you need on a given condition. It features examples of the latest imaging studies that depict the effects of aging on the brain, and new algorithms further streamline decision making. Expert Consult functionality - new to this edition - further enhances your reference power with convenient online access to the complete text and illustrations from the book.

**ANAESTHESIA**

The second edition of this essential handbook provides a practical, accessible guide to all emergency situations encountered during, and immediately following, anaesthesia. It covers the major specialties including cardiovascular medicine, respiratory medicine, obstetrics, and paediatrics, and each section begins with a clear table listing presentation, diagnosis, exclusions, immediate action, and follow up action. These subsections are then expanded upon in bullet format. Additional sections cover practical procedures such as how to insert a chest drain and how to administer inhaled drugs under anaesthesia, plus a concise drug formulary. The book will provide consultant and trainee anaesthetists, operating department personnel and anaesthetic nurses with a useful source of information and guidance that can be carried in the pocket, handbag or briefcase.

The Handbook of Clinical Anaesthesia has been completely updated for this new edition, providing trainee anaesthetists with a concise but comprehensive source of clinical information, and qualified anaesthetists with an indispensable aide-memoire. Written and edited by experts in the field, this compact but detailed text provides all the essential practical knowledge required by anaesthetists on co-existing medical conditions, operative procedures and techniques. The handbook is presented in Parts 1 to 3. The first part covers ‘Patient Conditions’; the second part ‘Surgical Procedures’; and the third part ‘Anaesthetic Factors’. Each part is subdivided into sections on each organ system, and each section is divided into chapters. These chapters are in alphabetical order, and cover all common and rare conditions that anaesthetists will encounter within their practice. Trainees will find this book to be an excellent general guide, but in particular a provider of reliable information in preparation for examination as well as teaching clinical technique and practice.

This book offers a comprehensive solution to any person wishing to sit, and ultimately pass, the SAQ paper for the Final FRCA. It is designed specifically to fit the examination format, with each double page spread containing a sample question and detailed model answer, acting both as a revision guide and as a template for answering similar questions in the exam. It includes the most recent guidelines and evidence base, whilst also covering in detail areas not included in other revision books. Written by two recent and successful exam candidates, and a highly respected senior anaesthetist, this book holds the key to passing the Final FRCA examination.
**ANAESTHESIA, methods**

One in three people will develop some kind of cancer in their lifetime. The overall cancer incidence has increased by 25% since 1975 and with anaesthetic involvement in hospital interactions estimated at around 75%, anaesthetists have major input into the care of the cancer patient. This input may start with the preoperative assessment and operation, but often extends to the intensive-care unit and the management of pain resulting from either the disease or from treatment interventions. This book is comprised of four main sections dealing with: cancer per se, anaesthesia for cancer surgery, intensive care, and pain management. The chapters are authored by acknowledged specialists in their field and are designed to break down what is often a complex area into comprehensible principles for treatment and management for the non-specialist. The anaesthesia section discusses not just major surgery but includes the specific and subtle differences that exist in the diverse types of specialist cancer surgery. The chapters related to pain deal with the current status of several specific cancer pain problems with contemporary evidence, recent developments in management, and novel ways of looking at conventional treatments such as the genetic aspects of opioid use.

**WF 980 WIL**

Thoracic anaesthesia is regarded as a post fellowship sub-speciality within anaesthesia, and can be daunting. This handbook provides an easily accessible, informative, and palatable guide to this often complex subject. The text is subdivided into basic sciences, pre-operative assessment, diagnostic procedures, and an anaesthetist’s walk-through of key thoracic surgical procedures. It concludes with an emergency section covering thoracic anaesthesia emergencies, critical care, and the thoracic surgical patient, and ends with essential guidance on the relevant practical procedures necessary to manage cases. The text provides an essential reference for the core curriculum of the Fellowship of the Royal College of Anaesthetists and for the day-to-day practice of post fellowship anaesthetists alike. The discussions of the surgical procedures are simple, highlighting the poignant stages that can affect the anaesthetic management of the patient. The authors use the very latest evidence in order to keep the reader up to speed with developments in the field. Whether on-call, running day-to-day lists or working within critical care, this indispensable guidebook will optimise the preparedness of all staff in dealing with any case, whether simple or complex.

**ANAESTHESIOLOGY**

*Clinical notes for the FRCA - 3rd ed. / [by] Charles D. Deakin.*

This is a new edition of a successful book of concise notes on clinical aspects of the examination for the Fellowship of the Royal College of Anaesthetists. It has been fully updated to reflect changes in the examination syllabus. This will be an ideal revision guide for trainee anaesthetists sitting the FRCA and similar examinations.

In everyday practice, anaesthetists can make use of a wide range of drug treatments, and require readily available and accessible information on the appropriate drugs to use in any given situation. Drugs in Anaesthesia and Intensive Care has quickly established itself as an essential reference text for all anaesthetists, both trainees and consultants. The fourth edition of this book includes information on many new drugs, with information on many others revised. The book describes the pharmacokinetics and pharmodynamics of all the drugs commonly used by anaesthetists, all organized so as to allow rapid access to specific information on the properties and characteristics of almost 200 drugs. Drugs in Anaesthesia and Intensive Care fourth edition successfully provides a comprehensive, up-to-date reference for anaesthetists in training, consultant anaesthetists, intensive care nurses, and anaesthetic assistants.

Culture, Health and Illness is the leading international textbook on the role of cultural and social factors in health, illness, and medical care. Since first published in 1984, it has been used in over 40 countries within universities, medical schools and nursing colleges. This new edition meets the ever-growing need for a clear starting point in understanding the clinical significance of cultural and social factors. The book addresses the complex interactions between health, illness and culture by setting out anthropological theory in a highly readable, jargon-free style and integrating this with the practice of health care using real-life examples and case histories. Fully revised throughout, the fifth edition has expanded its coverage of topics that are challenging both the patient and the carer's understanding of health and illness: poverty and inequality of healthcare, genetics, biotechnology, the internet and health, chronic diseases, drug-resistant infections, changes in nutrition and body image, medical care of migrants, medical technology, global
pandemics such as AIDS and malaria, drug and alcohol dependence, and patients' 'languages of distress', a complex topic central to the doctor-patient relationship. In today's world of increasing cultural, religious and ethnic diversity of populations, Culture, Health and Illness is essential reading for students of medicine, nursing, psychiatry, public health, health education, international health and medical anthropology, across the globe.

ATLAS

This book is the first and definitive reference in the growing field of ultrasonography in pain medicine. Each chapter details all you need to know to perform a specific block. Comparative anatomy and sonoanatomy of the various soft tissues are featured, and tips and tricks for correct placement of the ultrasound probe and administration of the injection are described in detail. All the major peripheral nerve blocks are discussed as well as the various injections of the spine, pelvis, and musculoskeletal system.

**BILIARY TRACT DISEASES**

Following a Tradition of Excellence from reviews of previous editions: "the best source of synthesized clinical wisdom" - Gastroenterology "a tour de force in terms of knowledge and effort" - The New England Journal of Medicine "the foremost liver book in the world" - The Journal of the American Medical Association "beautifully produced" - Hepatology Over the past 56 years, thousands of physicians have depended on Diseases of the Liver and Biliary System. Its didactic and reliable clinical guidance was - and still is - beyond comparison. This brand-new edition, now named Sherlock's Diseases of the Liver and Biliary System, after the late Professor Dame Sheila Sherlock, continues to provide concise clinical guidance for all those treating patients with hepato-biliary disease. Enabling clinicians to formulate incisive diagnoses and appropriate treatment strategies, this book has been updated to reflect the advances that have been made in the last 10 years, providing didactic and reliable clinical guidance in hepatology from the world's leading experts. A consistent chapter structure allows readers to access the information immediately, with summary boxes and key learning points throughout, and special emphasis on the latest in evidence-based clinical guidance. And for the first time, this edition now offers a free companion website providing the 680 full-color illustrations and figures in the book, for use in scientific presentations.

**BIOCHEMISTRY**

'Baynes does a great job of teaching biochemistry. I particularly like the snippets of information in the Clinical Boxes. Its like someone has sifted through the text and outlined the important bits for you...also great for revision' - ("Medical Student Review"). "Medical Biochemistry" combines basic science and clinical medicine in a thorough yet accessible, easy-to-read format, and this new edition reflects the latest information on genetic and molecular biology. A dynamic, full-colour design makes this biochemistry textbook a truly effective resource.

**BLOOD CELLS, cytology**

Following the familiar, easy-to-use at a Glance format, and in full-colour, Haematology at a Glance is an accessible introduction and revision text for medical students. Fully revised and updated to reflect changes to the content and assessment methods used by medical schools, this at a Glance provides a user-friendly overview of haematology to encapsulate all that the student needs to know. This new edition of Haematology at a Glance: * Contains full-colour artwork throughout, making the subject easy to understand* Presents schematic diagrams on the left page and concise explanations on the right* Has been rearranged to provide more structured and logical coverage of the topics* Includes more explanation of the basics of haematology science and the latest clinical treatments* Features expanded chapters on Lymphoma and Myeloproliferative disorders - incorporating new advances in knowledge and practice* Contains self-assessment case studies and MCQs This book is an invaluable resource for all undergraduates in medicine, immunology, and pharmacy, as well as for junior doctors, nurses and clinical nurse specialists and pharmacists who all need an introduction to haematology. Review of the previous edition "This is a very colourful book which concisely and clearly covers the areas of haematology for the undergraduate...this book is a welcome and reliable source of information." Surgo, Glasgow University Medical Journal.
BREAST FEEDING

Essential reading for health practitioners and all those wishing to influence policies, practices and healthcare services supporting breastfeeding.

CASE REPORTS

You've read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. The problem-solving approach of Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its emphasis on everyday practice strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing sound analytical and confident decision-making skills. The core areas of undergraduate study are covered in a logical sequence of learning activities; the same questions are asked of each clinical case, followed by detailed explanatory answers. OSCE counselling cases, with related questions and answers, also feature in each section. Key concepts and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter, making these volumes the perfect revision aid for all types of case-based examination. The Obstetrics and Gynaecology volume, fully revised and updated in this third edition, focuses on the following topics: * Early pregnancy problems * Pregnancy dating and fetal growth * Late pregnancy problems * Labour * Medical disorders of pregnancy * Puerperium * Abnormal uterine bleeding * Amenorrhoea and menopause * Incontinence and prolapse * Neoplasia * Discharge and pain* Infertility * Fertility control Volumes in the Core Clinical Cases series remain absolutely invaluable in the run up to clinical, written or OSCE examinations, and ideal course companions for all undergraduate medical students at various stages in their clinical training.

Hepatology is an important specialty with diseases and complications related to viral hepatitis and alcohol being the main reason for seeking specialist advice. On most general medical rotations and on most surgical wards there are patients with hepatological problems. Hepatology: Clinical Cases Uncovered contains clinical presentations with real-life patient cases and outcomes as seen on the wards and in exams, and leads students through a practical approach to diagnosis and management of hepatological disease. Following a question and answer approach, including self-assessment material and a ‘refresher’ section on the basic science, Hepatology: Clinical Cases Uncovered features investigations and the treatment options available for patients presenting with hepatological problems. Difficult concepts are clarified and relevant links are made between pathology and clinical presentation. Hepatology: Clinical Cases Uncovered is ideal for medical students, junior doctors on the Foundation Programme, GP trainees, residents, specialist nurses and nurse practitioners. The book is also an ideal refresher for hepatology or gastroenterology trainees at the beginning of their specialist training programme.

CHILD

An introduction to child psychiatry which draws on clinical experience as well as the latest research findings. Child Psychiatry includes many practical tips on successful assessment and treatment techniques. Its companion website features over 200 multiple choice questions and answers to assist those preparing for examinations, including MRCPsych Written in an accessible style by international experts in child psychiatry.
"An excellent up-to-date comprehensive and practical text book dealing with all aspects of paediatric hepatobiliary disease. It will be useful to both generalists and specialists as it is clinically focused with a problem-solving approach and should be useful for day-to-day as well as more esoteric clinical problems. I found it useful in my general paediatric practice and my trainees have also found it useful. It is very practical with a diagnostic approach and lots of tables and clinical pathways to follow when confronted with day-to-day clinical problems. I have road-tested it in real life with good effect." - Judging Panel, 2004 BMA Medical Book Competition Diseases of the Liver and Biliary System in Children, Third Edition provides a practical approach to the diagnosis and management of paediatric liver diseases, highlighting the importance of multidisciplinary team working and holistic management of the child and family. This fully revised edition has also been updated to cover recent advances in paediatric hepatology. It includes new chapters describing the effects of liver disease in pregnancy on mother and child through to adolescence. With increasing numbers of young people surviving into adult life this edition addresses the importance of managing adolescent transition effectively. Trainees practising paediatric gastroenterologists and hepatologists will welcome the practical approach outlined in this text, while other healthcare professionals involved in the management of liver disease in children will find it an accessible and comprehensive reference.

Children's nurses are faced with unique challenges when undertaking clinical skills, adapting their knowledge and practice for the physical and developmental age of their patients. The Oxford Handbook of Clinical Skills for Children's and Young People's Nursing is a practical guide to both the most basic and the increasingly complex elements of caring for the health needs of children and young people. Focusing on the key principles underpinning all elements of care, it provides a solid, evidence-based framework which practitioners can use to develop their clinical knowledge, skills, and attitudes. It systematically covers the body systems and the clinical skills relating to them, and includes additional tips and suggested courses of action when encountering difficulties with a procedure, with practical advice from current practitioners. Written by experienced children's nurses working either within clinical paediatric settings or as educators in the field, this handbook is an essential, quick, and reliable practice reference tool for any clinical setting.

Paediatric Symptom Sorter presents likely diagnoses, clinical pathways, tips and warnings for 97 symptoms common in childhood and will prove valuable to new and experienced clinicians alike.

CHRONIC DISEASE

The ageing of the population has enormous policy implications for the provision of, and access to, health care. People aged 65+ are the major consumers of the health care system accounting for about half of all NHS resources. Furthermore those aged 85+ represent 1 percent of the population but consume 10 percent of all health-care resources. Christina Victor's important new textbook provides: a comprehensive overview of the health status and experiences of older people; chapters on physical health, mental health, disability, and lifestyle; a synthesis of current policy developments relating to health and social care for older people; an examination of the key debates concerning the health of future cohorts of elders; and, an international, up-to-date perspective. Written by a leader in the field, the book covers key questions such as the fitness of older people in the future, the widening inequalities in the health of older people and the extent to which health in old age reflects habits and behaviour in earlier life.

Clinical Medicine Lecture Notes provides a comprehensive, accessible introduction to the management and treatment of medical conditions. A short manual of techniques on communication and physical examination in Part 1 is supported by the core knowledge required on diseases specific to each body system in Part 2. Combining readability with high quality illustrations, this seventh edition has been thoroughly revised to reflect up to date practice in examination and clinical investigation, and advances in the evidence base supporting modern day clinical practice. Numerous figures and tables help distil the information for revision purposes, and there are new chapters on the medical interview and assessment.

Whether you need to develop your knowledge for clinical practice, or refresh that knowledge in the run up to examinations, Clinical Medicine Lecture Notes will help foster a systematic approach to the clinical situation for all medical students and hospital doctors.

“Hutchison’s Clinical Methods”, first published over a century ago, is the classic textbook on clinical skills. It provides an outstanding source of learning and reference for undergraduate medical students and postgraduate doctors. It seeks to teach an integrated approach to clinical practice, so that new methods and investigations are grafted onto established patterns of clinical practice, rather than added on as something extra. The text is organised so that both system-related and problem-oriented chapters are included. Particular emphasis is placed on the importance of the doctor-patient relationship, the essential skills needed for clinical examination, and for planning the appropriate choice of investigations in diagnosis and management.

Medical Microbiology is written specifically for those working in the biomedical sciences: * undergraduate students looking for a concise textbook covering the basic principles * all those undergoing laboratory training * qualified staff looking to keep up-to-date Uniquely, the book is structured to follow the flow of specimens through a typical clinical microbiology laboratory, and so provides a practical guide to a working medical microbiology unit. The book begins by covering: * classification and nomenclature of microorganisms and viruses associated with human disease, including an indication of which are common and which are not * pathology of disease and host defences * basic microscopy, general aseptic and culture techniques, and identification methods including all the latest molecular techniques. It goes on to describe: * the organization of a typical microbiology lab * the practical isolation of pathogens from the complete range of human specimens, including urine, faeces, blood cultures, wound swabs, ENT samples, etc. - all chapters feature a standard presentation covering specimen collection and transport, principal pathogens, laboratory analysis/diagnosis, and antibiotic susceptibility testing. The book concludes by considering: * mycology * food and water microbiology

Medical Microbiology concentrates on practical diagnostics using the latest laboratory methods, with health and safety guidance linked to COSHH and standard operating procedures. The book should therefore be read by all those working, or training to work in a medical microbiology lab.

Medical Microbiology and Infection Lecture Notes is ideal for medical students, junior doctors, pharmacy students, junior pharmacists, nurses, and those training in the allied health professions. It presents a thorough introduction and overview of this core subject area, and has been fully revised and updated to include: Chapters written by leading experts reflecting current research and teaching practice New chapters covering Diagnosis of Infections and Epidemiology and Prevention & Management of Infections Integrated full-colour illustrations and clinical images A self-assessment section to test understanding Whether you need to develop your knowledge for clinical practice, or refresh that knowledge in the run up to examinations, Medical Microbiology and Infection Lecture Notes will help foster a systematic approach to the clinical situation for all medical students and hospital doctors.

“Master Medicine: Microbiology and Infection” is brief and accessible, approached from the point of view of what you will need to know in order to understand the clinical work you will eventually be doing. It includes a wide range of self-assessment material, ideal for testing your understanding, and helping you to prepare for your exams.
COMMUNITY HEALTH NURSING

With concise, focused coverage of nursing in the community, this easy-to-read textbook provides the essential information you need to know for clinical practice - from nursing roles and care settings to vulnerable population groups. It features a practical, community-oriented approach, with an emphasis on health promotion and disease prevention.

The skills required by children's nurses are many and varied, and are undertaken in a variety of settings. Sick children are cared for at home, in children's units and hospitals, and sometimes in adult wards. In addition, children with disabilities may need nursing care while at special schools or in residential settings. This book provides a clinical manual of common practices. Each practice is research-based and presented in a common format which covers: Objectives; Rationale; Factors to note; Guidelines; Positioning; Equipment; Method; Special observations and possible complications; and, References and further reading. The guidelines have been written specifically for children's nursing by contributors from well-known children's units. They are not simply adaptations from adult practices and therefore recognise the unique differences between adult and children's nursing. The introductory section covers common concepts and infection control. There is also a chapter on complementary therapies and an appendix on the use of play as a distraction. All hospital and community nurses dealing with children, whether at home, in specialised units or in community settings, will find the book of great practical help.

COMMUNITY HEALTH SERVICES

With concise, focused coverage of nursing in the community, this easy-to-read textbook provides the essential information you need to know for clinical practice - from nursing roles and care settings to vulnerable population groups. It features a practical, community-oriented approach, with an emphasis on health promotion and disease prevention.

CRITICAL CARE

In everyday practice, anaesthetists can make use of a wide range of drug treatments, and require readily available and accessible information on the appropriate drugs to use in any given situation. Drugs in Anaesthesia and Intensive Care has quickly established itself as an essential reference text for all anaesthetists, both trainees and consultants. The fourth edition of this book includes information on many new drugs, with information on many others revised. The book describes the pharmacokinetics and pharamodynamics of all the drugs commonly used by anaesthetists, all organized so as to allow rapid access to specific information on the properties and characteristics of almost 200 drugs. Drugs in Anaesthesia and Intensive Care fourth edition successfully provides a comprehensive, up-to-date reference for anaesthetists in training, consultant anaesthetists, intensive care nurses, and anaesthetic assistants.

An understanding of critical care is one of the key objectives of medical and surgical training, and viva examinations in particular remain a source of anxiety for many candidates. Surgical Critical Care Vivas follows the same format as the hugely popular General Pathology Vivas and gives candidates a means of practising some of the most common questions that they will be asked in their viva examinations. Pocket-sized, for portability, and packed with useful information in an east-to-use A-Z format, this book will help the reader to broaden their knowledge base and, by practising the vivas, gain confidence in their examination technique.

DECISION MAKING

Foundation Programme: 250 SJTs for foundation year entry / [by] Olivier Picard, Gail Allsop [and] Lydia Campbell.
With over 250 SJT (Situational Judgement Tests) practice questions, and in-depth explanations spanning over 500 pages, this book is an ideal preparation tool for the Foundation Programme entry exam for entry in Foundation Year 1 (FY1). Written by doctors and people involved in writing and testing the actual exam questions.

Oxford Assess and Progress: Situational Judgement Test is THE definitive guide for students preparing to sit the new Situational Judgement Test for entry into the UK Foundation Programme. This authoritative book, mapped to the foundation programme curriculum and GMC guidance, includes over 230 practice questions to help readers maximize their SJT score. This essential guide demystifies the SJT and provides a structure for identifying 'correct' answers. All scenarios are based on real experiences informed by over 40 doctors and closely mirror questions expected to appear in the SJT. Detailed explanations are provided for each answer based on established professional guidance. These help readers internalise the attitudes and values required of junior doctors which are not always taught explicitly at medical school. Written by junior doctors and overseen by experts in medical assessment, this authoritative guide is aimed at students wanting to achieve the best possible score and take control of the first stage of their medical careers.

DIABETES MELLITUS

Diabetes is a common and debilitating condition encountered by all doctors worldwide, regardless of specialist interest. This book aims to give the reader an understanding of the background, diagnosis, investigation and management of diabetes and endocrine disease. This book is set out in three main sections. The first gives a background understanding of diabetes and a review of glandular systems. The second outlines the disease problems and their investigation, including the specific complications of diabetes. The third covers the management and treatment of diabetes and endocrine disease, importantly including prevention and screening. This is the third book in a new series which combines a symptoms and problem-based approach. It is of use to medical students and instructors, to junior doctors and to health care professionals dealing with diabetes and endocrine diseases.

PAEDIATRIC SYMPTOM SORTER

Paediatric Symptom Sorter presents likely diagnoses, clinical pathways, tips and warnings for 97 symptoms common in childhood and will prove valuable to new and experienced clinicians alike.

ADVANCED HEALTH ASSESSMENT AND CLINICAL DIAGNOSIS IN PRIMARY CARE

Designed for advanced practice nurses and advanced practice nursing students, as well as Physician's Assistant students and practitioners, "Advanced Health Assessment & Clinical Diagnosis in Primary Care, 4th Edition", is a practical resource that takes you to the 'next step' of health assessment, beyond basic history and physical examination and through the diagnostic reasoning process. Accessible and concise, it approaches physical examination by focusing on a specific chief complaint rather than a diagnosis of a disease entity. Each chapter is organized into four major areas: Focused History; Focused Physical Examination; Laboratory and Diagnostic Studies; and, Differential Diagnosis. Those who master the diagnostic reasoning process in this text will be able to accurately diagnose the majority of conditions they will see in clinical practice.

Paediatric Symptom Sorter presents likely diagnoses, clinical pathways, tips and warnings for 97 symptoms common in childhood and will prove valuable to new and experienced clinicians alike.
**DIAGNOSTIC TECHNIQUES AND PROCEDURES**

Designed for advanced practice nurses and advanced practice nursing students, as well as Physician's Assistant students and practitioners, "Advanced Health Assessment & Clinical Diagnosis in Primary Care, 4th Edition", is a practical resource that takes you to the 'next step' of health assessment, beyond basic history and physical examination and through the diagnostic reasoning process. Accessible and concise, it approaches physical examination by focusing on a specific chief complaint rather than a diagnosis of a disease entity. Each chapter is organized into four major areas: Focused History; Focused Physical Examination; Laboratory and Diagnostic Studies; and, Differential Diagnosis. Those who master the diagnostic reasoning process in this text will be able to accurately diagnose the majority of conditions they will see in clinical practice.

"Hutchison's Clinical Methods", first published over a century ago, is the classic textbook on clinical skills. It provides an outstanding source of learning and reference for undergraduate medical students and postgraduate doctors. It seeks to teach an integrated approach to clinical practice, so that new methods and investigations are grafted onto established patterns of clinical practice, rather than added on as something extra. The text is organised so that both system-related and problem-oriented chapters are included. Particular emphasis is placed on the importance of the doctor-patient relationship, the essential skills needed for clinical examination, and for planning the appropriate choice of investigations in diagnosis and management.

**DIAGNOSTIC TECHNIQUES, OBSTETRICAL AND GYNAECOLOGICAL**

This irreplaceable reference compiles the most up-to-date and relevant material on obstetrics and gynaecology into one volume. Strongly evidence-based, it includes the latest knowledge and guidelines from a wide range of sources and contains the key recommendations that a practising obstetrician or gynaecologist needs to know; presenting them in a uniform and accessible way, allowing for quick diagnosis and optimal care. In line with the Royal College of Obstetrics and Gynaecology curriculum for specialty training, this book covers not just the clinical knowledge required but also information on the communication, technical and professional skills needed to practise in the specialty. With each chapter written by internationally renowned specialists and edited by five of the leading figures in obstetrics and gynaecology, this book will be a vital resource for all practising clinicians.

**DISASTER PLANNING**

**Learning from disasters: a management approach - 3rd ed. / [by] Brian Toft and Simon Reynolds.**  
This compelling book is essential reading for all those involved with risk management, disaster planning and security and safety management. The third edition includes a new introductory chapter that demonstrates on a theoretical and practical level a number of reasons why individuals and groups of people fail to learn from disasters in the first place. The book offers an important insight into the way organisations implement policies, systems and procedures to prevent future disasters occurring. The message is very clear: where organisations fail to learn from disasters, history is likely to repeat itself.

**DRUG THERAPY**

**DRUG THERAPY**

"Rang & Dale's Pharmacology" provides you with all the knowledge you need to get through your pharmacology course and beyond. Drs. Humphrey P. Rang, Maureen M. Dale, James M. Ritter, Rod Flower, and Graeme Henderson present a clear and accessible approach to the analysis of therapeutic agents at the cellular and molecular level through detailed diagrams, full-color illustrations, and pedagogical features. Plus, USMLE-style review questions and additional learning tools online make this the perfect resource to turn to for a full understanding of key concepts in pharmacology.

**EDUCATION**

This student friendly practical guide helps you get to grips with reflective practice in teaching, through bite-sized sections that are informative and quickly digestible. The book clearly explains some of the best-known theories on reflective practice and then shows how reflection on and in practice can have a positive impact on classroom performance. The very real problems faced by beginning teachers are brought to life through the use of rich case studies as well as extracts drawn from the reflective journals of those starting their teaching career. The illustrative case studies consider how reflective practice can inform your teaching practice, including: Preparing for teaching Fitting into your school Designing lessons Managing behaviour Planning for creativity Assessing effectively Developing essential teaching techniques Working effectively with your mentor Extending your professional practice at Master's level An additional feature of the book is the inclusion of a number of new suggestions for developing reflective practice based on the authors' experience of training new teachers and supporting beginning teachers. Through reflective tasks based on the real problems that beginning teachers face you can actively develop your understanding and confidence in this area.

This book is essential reading for trainees and newly qualified teachers as well as those supporting new entrants to the profession. Contributors: Linda Devlin, Mary Dunne, Vanessa Dye, Mahmoud Emira, Angela Gault, Fay Glendenning, Gerald Griggs, Paul Gurton, Dot Heslop, Lesley Mycroft, Sarah Powell, Lorraine Thomas, Julia Wilde.

**EDUCATION, NURSING**

This is a fully up-to-date "Candidate Handbook", written by Yvonne Nolan, with the revised evidence and assessment opportunities consumers have requested. * Features knowledge specifications continually referenced in the margin so that readers know what is being covered and can prepare for assessment. * New evidence opportunity features are clearly linked to specific performance criteria and are cross-referenced to other elements within the qualification - helping candidates to plan holistically. * Includes updated legislation and references to regulations where appropriate so that candidates and assessors have the most current information on frameworks related to the health and social care sector. * Features new information on the latest movements and trends in health and social care so that readers are aware of initiatives that may affect their working practice. * New edition also includes many updated photos to demonstrate best practice more clearly. * Includes a CD-ROM, shelved at Library Office CD-ROM 13370, containing two additional units (369 and 375) to give even greater coverage.

**EDUCATION, NURSING**

This CD-ROM containing two additional units (369 and 375) to give even greater coverage. It accompanies the candidate handbook with the same title shelved at WY 18.2 NOL.
EMERGENCIES

The second edition of this essential handbook provides a practical, accessible guide to all emergency situations encountered during, and immediately following, anaesthesia. It covers the major specialties including cardiovascular medicine, respiratory medicine, obstetrics, and paediatrics, and each section begins with a clear table listing presentation, diagnosis, exclusions, immediate action, and follow up action. These subsections are then expanded upon in bullet format. Additional sections cover practical procedures such as how to insert a chest drain and how to administer inhaled drugs under anaesthesia, plus a concise drug formulary. The book will provide consultant and trainee anaesthetists, operating department personnel and anaesthetic nurses with a useful source of information and guidance that can be carried in the pocket, handbag or briefcase.

EMERGENCY MEDICINE, methods

Following the familiar, easy-to-use at a Glance format, and in full-colour, this brand new title provides an accessible introduction and revision aid for medical students and junior doctors. Reflecting the increased profile of Emergency Medicine in clinical practice and the medical school curriculum, Adult Emergency Medicine at a Glance provides a user-friendly overview of the key subjects that will enable any student or junior doctor to 'hit the ground running' when they enter one of the most exciting areas of clinical medicine. Adult Emergency Medicine at a Glance is: A concise, visually orientated course in emergency medicine that is perfect for both study and revision Organised around symptoms: 'Short of Breath', rather than diagnoses: 'Pneumonia' Focused on the most common or dangerous conditions you will see in the Emergency Department and includes the latest cardiac resuscitation guidelines Comprehensively illustrated throughout with over 47 full-page colour illustrations.

ENDOCRINE SYSTEM, physiology

Diabetes is a common and debilitating condition encountered by all doctors worldwide, regardless of specialist interest. This book aims to give the reader an understanding of the background, diagnosis, investigation and management of diabetes and endocrine disease. This book is set out in three main sections. The first gives a background understanding of diabetes and a review of glandular systems. The second outlines the disease problems and their investigation, including the specific complications of diabetes. The third covers the management and treatment of diabetes and endocrine disease, importantly including prevention and screening. This is the third book in a new series which combines a symptoms and problem-based approach. It is of use to medical students and instructors, to junior doctors and to health care professionals dealing with diabetes and endocrine diseases.

ENDOSCOPY, education

Successful training in gastrointestinal endoscopy / edited by Jonathan Cohen.
Endoscopy is the primary diagnostic method for GI complaints and is replete with an ever expanding array of therapeutic capabilities. Successful Training in Gastrointestinal Endoscopy will provide all gastroenterologists with the exact set of skills required to perform endoscopy at the highest level. GI trainees will find it a crucial primer for learning endoscopy; teachers will find it a guide to understand how best to develop the expertise of their students; and
experienced practicing gastroenterologists will find it a useful refresher tool to brush up on their existing endoscopic skills and to familiarise themselves with new procedures, including issues of safety and competence while performing them. With contributions from internationally recognized leaders in endoscopy education and an endorsement by the World Organisation of Digestive Endoscopy, each chapter examines the specific skill sets and procedure related tasks which must be mastered when learning a particular technique, including specific descriptions of accessories required, standard training methods for the procedure, optimal utilization of novel learning modalities such as simulators, quality measures and objective parameters for competency, available tools for assessing competency once training has been completed. In addition to the 400 high-quality, outstanding colour photos, the book comes with a DVD, shelved at Library Office DVD-ROM 13404, containing over 130 annotated teaching videos of both actual procedures and ex-vivo animal model simulations. These videos illustrate, in a step by step fashion the proper techniques to be followed, highlighting clinical pearls from the experts and the most common mistakes to avoid. Successful Training in Gastrointestinal Endoscopy should be a key purchase for all gastroenterologists, whether in training or experienced, to allow them to develop and perfect their endoscopic skills. It is a particularly useful guide for those interested in mastering the latest new techniques and procedures and an essential reference for teachers of endoscopy and students alike.

Edinburgh: Churchill Livingstone Elsevier, 2011. "Practical GI Endoscopy" provides an illustrated concise guide to the use of endoscopy in the diagnosis and management of disorders in the upper and lower gastrointestinal tract. There is a clinical 'hands on' emphasis throughout with expert advice on the practical aspects of performing endoscopic techniques in both diagnosis and therapy, tips for avoiding complications and how best to deal with them if and when encountered. Written by the leading international names in gastrointestinal endoscopy, the text has been expertly edited into a succinct, instructive format. Presented in short paragraphs structured with headings, subheadings and bullet points and richly illustrated throughout with full-color
photographs and line drawings the book will be an invaluable companion to the busy practicing gastroenterologist.

**ETHICS, MEDICAL**

*The worried student’s guide to medical ethics and law: thriving, not just surviving* / [by] Deborah Bowman.
Offers a clear and comprehensive guide to medical ethics and law for students, educators and practicing professionals based on the realities of medical education, training and practice.

**EXAMINATION NOTES**

This is a new edition of a successful book of concise notes on clinical aspects of the examination for the Fellowship of the Royal College of Anaesthetists. It has been fully updated to reflect changes in the examination syllabus. This will be an ideal revision guide for trainee anaesthetists sitting the FRCA and similar examinations.

**EXAMINATION QUESTIONS**

*Foundation Programme: 250 SJTs for foundation year entry* / [by] Olivier Picard, Gail Allsop [and] Lydia Campbell.
With over 250 SJT (Situational Judgement Tests) practice questions, and in-depth explanations spanning over 500 pages, this book is an ideal preparation tool for the Foundation Programme entry exam for entry in Foundation Year 1 (FY1). Written by doctors and people involved in writing and testing the actual exam questions.

*SAQs for the FRCA final examination* / [by] James Shorthouse, Graham Barker [and] Carl Waldmann.
This book offers a comprehensive solution to any person wishing to sit, and ultimately pass, the SAQ paper for the Final FRCA. It is designed specifically to fit the examination format, with each double page spread containing a sample question and detailed model answer, acting both as a revision guide and as a template for answering similar questions in the exam. It includes the most recent guidelines and evidence base, whilst also covering in detail areas not included in other revision books. Written by two recent and successful exam candidates, and a highly respected senior anaesthetist, this book holds the key to passing the Final FRCA examination.

Oxford Assess and Progress: Situational Judgement Test is THE definitive guide for students preparing to sit the new Situational Judgement Test for entry into the UK Foundation Programme. This authoritative book, mapped to the foundation programme curriculum and GMC guidance, includes over 230 practice questions to help readers maximize their SJT score. This essential guide demystifies the SJT and provides a structure for identifying 'correct' answers. All scenarios are based on real experiences informed by over 40 doctors and closely mirror questions expected to appear in the SJT. Detailed explanations are provided for each answer based on established professional guidance. These help readers internalise the attitudes and values required of junior doctors which are not always taught explicitly at medical school. Written by junior doctors and overseen by experts in medical assessment, this authoritative guide is aimed at students wanting to achieve the best possible score and take control of the first stage of their medical careers.

*Succeeding in the MRCGP Applied Knowledge Test (AKT): 500 SBAs, EMQs and picture MCQs with a full mock test - 2nd ed.* / [by] Chirag Mehta, Mark Williams and Milan Mehta.
Do you want to pass the MRCGP AKT first time and with a high score? Are you looking for a comprehensive MRCGP AKT revision book? Succeeding in the MRCGP Applied Knowledge Test is an essential part of progressing through general practice training. This comprehensive revision guide is the most up to date available and covers the entire syllabus through practice SBAs, EMQs and picture MCQs. Written by doctors who have successfully passed the MRCGP AKT, this book is packed with advice and tips, including guidance on topics that candidates consistently struggle with. This clear and time-saving MRCGP revision guide provides practical tips and advice on exam technique and how to best approach the test and maximise your score. It covers all possible question types that will be encountered. It offers detailed explanations of the answers with advice from doctors who have successfully passed the exam. It includes 300 practice SBAs, EMQs and picture MCQs. It also provides a full mock test, comprising a further 200 questions, that can be completed under timed conditions. This engaging and easy to use guide will provide you with everything you need to know to fully prepare for all aspects of the MRCGP AKT, and is an essential book for anyone serious in excelling in this exam. This is a useful guide to the Applied Knowledge Test, and a handy alternative to web-based resources. "Succeeding in the nMRCGP AKT" is written by Chirag Mehta, Mark Williams & Milan Mehta. "There are so many websites, free and otherwise, that I wonder why there is a gap for printed books about the Applied Knowledge Test. This
book is written by three GPs who were recently successful in passing the AKT. There is a very brief section on how to prepare for the AKT; it seems a shame that they were not able to use their recent experiences to expand this section. At the time of writing there had been 6 sittings of the AKT (now 8) and there is a very short discussion of the division of marks and candidate weaknesses noted in the most recent sitting. It would probably have been more helpful to have a summary of weaknesses over the sittings as a whole. There are 300 practice questions, divided into sections according to type, i.e. single best answer, extended matching etc. Detailed answers with references to appropriate information sources follow each section. I think this makes the book very useful early on in the revision process. Dr Mohanna, who is a faculty chair and director of medical education, refers to the book as a ‘signpost’ and ‘jump off’ and I think that using this book as a way of identifying gaps and easily moving on to fill them would be the best use of the resource. Each question is labelled with the appropriate curriculum heading and indexed in the matching groups at the back of the book. This is a useful way of checking curriculum coverage and again would be helpful early on in revision. Finally there is a 200 question mock paper, the same length as the real AKT, albeit paper not computer-based. This section is also followed by detailed answers and reference links. If you want a paper-based AKT book, I think this is a useful one to buy. This is a newly published book; as time goes on it will be important to make sure you are buying the most up-to-date edition. Dr Clare Etherington is a GP in Harrow in northwest London. I am preparing to sit the AKT soon and I must say that this book is turning out to be indispensable. For a start, it starts with up to date statistics on the recent exams and highlights areas that candidates haven’t performed well. It is a perfect size for a book that I would want to take with me most of the time and is well laid out with good font size and structure making it easy and attractive to read. The coverage of the RCGP curriculum is excellent and it serves as a good tool to identify one’s weaknesses. I particularly like the unique subject index at the back enabling me to easily pick out the questions relating to particular curriculum coverage for more focused revision. The answers are detailed and exhaustive and I do not have to keep going back to huge reference materials like the NICE guidelines each time I tackle a question. My only criticism of the book would be on the images you can increase clarity by having them in colour. It would also be helpful to have a feedback method for questions we find ambiguous. This book is excellent value for money and a must have for any trainee preparing for the AKT. (By Dr J Gtonga). "As a GP trainee (ST2) who is planning to sit the AKT exam later this year, I am always keen to use such a book to help me prepare for the exam allowing self-assessment along the way. There are many similar books on the market, and I already have a few to say the least. I am currently working through the questions found in this book, and on first impression it appears well written with an excellent coverage of the vast RCGP curriculum. The answers given are detailed enough giving the ‘nuts and bolts’ of what you need to know, either confirming you are correct or highlighting your weaknesses and sign-posting you to further ‘relevant’ reading to bridge the gaps in your knowledge. My one and only criticism of the book is that some of the images used in questions on fundoscopy, rashes and ENT are in black and white and quite unclear making them difficult to interpret. It may have been useful for the book to have clearer/colour images or a companion webpage where all images used in the book could be seen in colour as a point of reference. Despite this minor issue I would fully recommend this book to others considering purchasing such a book in helping to prepare for the AKT, with 500 questions for under GBP20 this book represents value for money when compared to similar books on the market". (Mr Richard A. Jenkins).

**Surgical critical care vivas / [by] Mazyar Kanani.**

An understanding of critical care is one of the key objectives of medical and surgical training, and viva examinations in particular remain a source of anxiety for many candidates. Surgical Critical Care Vivas follows the same format as the hugely popular General Pathology Vivas and gives candidates a means of practising some of the most common questions that they will be asked in their viva examinations. Pocket-sized, for portability, and packed with useful information in an east-to-use A-Z format, this book will help the reader to broaden their knowledge base and, by practising the vivas, gain confidence in their examination technique.

**EYE DISEASES**

Beautifully illustrated throughout, Ophthalmology Lecture Notes concentrates on the most common eye problems that health practitioners are expected to diagnose and manage. The book begins with a brief introduction to ocular anatomy and eye examination, and then focuses on core conditions in ophthalmology. The highly structured text includes self-assessment material at the end of each chapter, as well as a series of clinical cases at the end of the book - all designed to facilitate easy access to information, making the book an ideal resource for both study and revision, while the brand new companion website at www.wiley.com/go/james/ophthalmology features all of the book’s illustrations and images. Whether you need to develop your knowledge for clinical practice, or refresh that knowledge in the run up to examinations, Ophthalmology Lecture Notes will help foster a systematic approach to the clinical situation for all medical students and hospital doctors.

**FORENSIC MEDICINE**

Forensic medicine covers an amazing range of different subjects and no single individual can expect to be an expert in all of them. The Oxford Handbook of Forensic Medicine provides comprehensive coverage of all areas within this complex discipline. Written for specialists and non-specialists alike, it will appeal to practising forensic scientists, as well as lawyers, police officers, and forensic science students. It shows how forensic medicine has been used in specific cases enabling the reader to apply their knowledge in real life. A detailed glossary of medical terms helps those without
medical training to understand medical reports and practices. This easily-portable guide is essential reading for the busy clinical doctor or nurse, and others working at the interface between medicine and law.

**GENITAL DISEASES, FEMALE**

You’ve read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. The problem-solving approach of Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its emphasis on everyday practice strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing sound analytical and confident decision-making skills. The core areas of undergraduate study are covered in a logical sequence of learning activities; the same questions are asked of each clinical case, followed by detailed explanatory answers. OSCE counselling cases, with related questions and answers, also feature in each section. Key concepts and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter, making these volumes the perfect revision aid for all types of case-based examination. The Obstetrics and Gynaecology volume, fully revised and updated in this third edition, focuses on the following topics: * Early pregnancy problems * Pregnancy dating and fetal growth * Late pregnancy problems * Labour * Medical disorders of pregnancy * Puerperium * Abnormal uterine bleeding * Amenorrhoea and menopause * Incontinence and prolapse * Neoplasia * Discharge and pain* Infertility * Fertility control

First published in 1919 as 'Diseases of Women', Gynaecology by Ten Teachers is well established as a concise, yet comprehensive, guide within its field. The nineteenth edition has been thoroughly updated, integrating clinical material with the latest scientific advances. With an additional editor and new contributing authors, the new edition combines authoritative detail while signposting essential knowledge. Retaining the favoured textual features of preceding editions, each chapter is highly structured, with overviews, definitions, aetiology, clinical features, investigation, treatments, key points and additional reading where appropriate. Together with its companion Obstetrics by Ten Teachers, the volume has been edited carefully to ensure consistency of structure, style and level of detail, as well as avoiding overlap of material. For almost a century the 'Ten Teachers' titles have together found favour with students, lecturers and practitioners alike. The nineteenth editions continue to provide an accessible 'one stop shop' in obstetrics and gynaecology for a new generation of doctors. Key features - Fully revised - some chapters completely rewritten by brand-new authors - Plentyful illustrations - text supported and enhanced throughout by colour line diagrams and photographs - Clear and accessible - helpful features include overviews, key points and summaries - Illustrative case histories - engage the reader and provide realistic advice on practicing gynaecology.

This irreplaceable reference compiles the most up-to-date and relevant material on obstetrics and gynaecology into one volume. Strongly evidence-based, it includes the latest knowledge and guidelines from a wide range of sources and contains the key recommendations that a practising obstetrician or gynaecologist needs to know; presenting them in a uniform and accessible way, allowing for quick diagnosis and optimal care. In line with the Royal College of Obstetrics
and Gynaecology curriculum for specialty training, this book covers not just the clinical knowledge required but also information on the communication, technical and professional skills needed to practise in the specialty. With each chapter written by internationally renowned specialists and edited by five of the leading figures in obstetrics and gynaecology, this book will be a vital resource for all practising clinicians.

**GERIATRICS**

Popular with generations of practitioners, “Brocklehurst’s Textbook of Geriatric Medicine and Gerontology” has been the definitive reference of choice in the field of geriatric care. The new 7th Edition, by Howard M. Fillit, MD, Kenneth Rockwood, MD, and Kenneth Woodhouse, carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population. It includes consistent discussions of clinical manifestations, diagnosis, prevention, treatment, and more that make reference quick and easy, while nearly 1,000 illustrations complement the text to help you find what you need on a given condition. It features examples of the latest imaging studies that depict the effects of aging on the brain, and new algorithms further streamline decision making. Expert Consult functionality - new to this edition - further enhances your reference power with convenient online access to the complete text and illustrations from the book.

Elderly Care Medicine Lecture Notes provides all the necessary information, within one short volume, for a sound introduction to the particular characteristics and needs of elderly patients. Presented in a user-friendly format, combining readability with high-quality illustrations, this eighth edition has been thoroughly revised to reflect advances in knowledge on how disease presents in elderly people, and changes in management practice, particularly regarding stroke, dementia, delirium, and cancer. New for this edition, Elderly Care Medicine Lecture Notes also features: More treatment tables and boxes throughout for rapid access and revision Expansion of material on polypharmacy and prescribing Discussion of emotional support, counselling and spirituality Advice for doctors on breaking bad news and end-of-life care Consideration of ethical and legal issues A companion website at www.lecturenoteselderlycaremed.com features appendices which can be used as guidelines in a clinical setting, key revision points for each chapter, further reading suggestions, and extended content for specialty training in geriatrics. Not only is this book a great starting point to support initial teaching on the topic, but it is also easy to dip in and out of for reference or revision at the end of a module, rotation or final exams. Whether you need to develop or refresh your knowledge of geriatrics, Elderly Care Medicine Lecture Notes presents ‘need to know’ information for all those involved in treating elderly people.

**GYNAECOLOGY**

First published in 1919 as 'Diseases of Women', Gynaecology by Ten Teachers is well established as a concise, yet comprehensive, guide within its field. The nineteenth edition has been thoroughly updated, integrating clinical material with the latest scientific advances. With an additional editor and new contributing authors, the new edition combines authoritative detail while signposting essential knowledge. Retaining the favoured textual features of preceding editions, each chapter is highly structured, with overviews, definitions, aetiology, clinical features, investigation, treatments, key points and additional reading where appropriate. Together with its companion Obstetrics by Ten Teachers, the volume has been edited carefully to ensure consistency of structure, style and level of detail, as well as avoiding overlap of material. For almost a century the 'Ten Teachers' titles have together found favour with students, lecturers and practitioners alike. The nineteenth editions continue to provide an accessible 'one stop shop' in obstetrics and gynaecology for a new generation of doctors. Key features - Fully revised - some chapters completely rewritten by brand-new authors - Plentiful illustrations - text supported and enhanced throughout by colour line diagrams and photographs - Clear and accessible - helpful features include overviews, key points and summaries - Illustrative case histories - engage the reader and provide realistic advice on practicing gynaecology.
HAEMATOLOGIC DISEASES

Following the familiar, easy-to-use at a Glance format, and in full-colour, Haematology at a Glance is an accessible introduction and revision text for medical students. Fully revised and updated to reflect changes to the content and assessment methods used by medical schools, this at a Glance provides a user-friendly overview of haematology to encapsulate all that the student needs to know. This new edition of Haematology at a Glance: * Contains full-colour artwork throughout, making the subject easy to understand* Presents schematic diagrams on the left page and concise explanations on the right* Has been rearranged to provide more structured and logical coverage of the topics* Includes more explanation of the basics of haematology science and the latest clinical treatments* Features expanded chapters on Lymphoma and Myeloproliferative disorders - incorporating new advances in knowledge and practice* Contains self-assessment case studies and MCQs This book is an invaluable resource for all undergraduates in medicine, immunology, and pharmacy, as well as for junior doctors, nurses and clinical nurse specialists and pharmacists who all need an introduction to haematology. Review of the previous edition "This is a very colourful book which concisely and clearly covers the areas of haematology for the undergraduate...this book is a welcome and reliable source of information.” Surgo, Glasgow University Medical Journal.

HEALTH FACILITY ADMINISTRATION

This book is the winner of the Basis of Medicine Award in the BMA Book Medical Book Competition 2006! In many countries, during the last decade there has been a growing public realization that healthcare organisations are often dangerous places to be. Reports published in Australia, Canada, New Zealand, United Kingdom and the USA have served to focus public and policy attention on the safety of patients and to highlight the alarmingly high incidence of errors and adverse events that lead to some kind of harm or injury. This book presents a research-based perspective on patient safety, drawing together the most recent ideas and thinking from researchers on how to research and understand patient safety issues, and how research findings are used to shape policy and practice. The book examines key issues, including: analysis and measurement of patient safety; approaches to improving patient safety; future policy and practice regarding patient safety; and, the legal dimensions of patient safety. "Patient Safety" is essential reading for researchers, policy makers and practitioners involved in, or interested in, patient safety. The book is also of interest to the growing number of postgraduate students on health policy and health management programmes that focus upon healthcare quality, risk management and patient safety. Contributors include: Sally Adams, Tony Avery, Maureen Baker, Paul Beatty, Ruth Boden, Tanya Claridge, Gary Cook, Caroline Davy, Susan Dovey, Aneez Esmail, Rachel Finn, Martin Fletcher, Sally Giles, John Hickner, Rachel Howard, Amanda Howe, Michael A. Jones, Sue Kirk, Rebecca Lawton, Martin Marshall, Caroline Morris, Dianne Parker, Shirley Pearce, Bob Phillips, Steve Rogers, Richard Thomson, Charles Vincent, Kieran Walshe, Justin Waring, Alison Watkin, Fiona Watts, Liz West, and, Maria Woloshynowych.

With this important resource, health care leaders from the board room to the point-of-care can learn how to apply the science of safe and best practices from industry to healthcare by changing leadership practices, models of service delivery, and methods of communication.

HEALTH SERVICES FOR THE AGED

The ageing of the population has enormous policy implications for the provision of, and access to, health care. People aged 65+ are the major consumers of the health care system accounting for about half of all NHS resources. Furthermore those aged 85+ represent 1 percent of the population but consume 10 percent of all health-care resources. Christina Victor's important new textbook provides: a comprehensive overview of the health status and experiences of older people; chapters on physical health, mental health, disability, and lifestyle; a synthesis of current policy developments relating to health and social care for older people; an examination of the key debates concerning the health of future cohorts of elders; and, an international, up-to-date perspective.Written by a leader in the field, the book covers key questions such as the fitness of older people in the future, the widening inequalities in the health of older people and the extent to which health in old age reflects habits and behaviour in earlier life.

**HOLISTIC NURSING, methods**

The concept of 'person-centredness' has become established in approaches to the delivery of healthcare, particularly with nursing, and is embedded in many international healthcare policy frameworks and strategic plans. This book explores person-centred nursing using a framework that has been derived from research and practice. Person-Centred Nursing is a theoretically rigorous and practically applied text that aims to increase nurses' understanding of the principles and practices of person-centred nursing in a multiprofessional context. It aims to advance new understandings of person-centred nursing concepts and theories through the presentation of an inductively derived and tested framework for person-centred nursing. In addition it explores a variety of strategies for developing person-centred nursing and presents case examples of the concept in action. This is a practical resource for all nurses who want to develop person-centred ways of working.

**IMMUNE SYSTEM, physiology**

Basic science and clinical immunology are demystified for the medical and other health sciences student. The basic immunological processes are described first, with a level of detail restricted to what is appropriate for medical and other similar curricula. In the second part of the book immunological mechanisms behind major diseases of the various body systems are explained. Throughout the text clinical details are highlighted and more in-depth material is differentiated from the main text.

**INFANT**

An excellent up-to-date comprehensive and practical text book dealing with all aspects of paediatric hepatobiliary disease. It will be useful to both generalists and specialists as it is clinically focused with a problem-solving approach and should be useful for day-to-day as well as more esoteric clinical problems. I found it useful in my general paediatric practice and my trainees have also found it useful. It is very practical with a diagnostic approach and lots of tables and clinical pathways to follow when confronted with day-to-day clinical problems. I have road-tested it in real life with good
effect.” - Judging Panel, 2004 BMA Medical Book Competition Diseases of the Liver and Biliary System in Children, Third Edition provides a practical approach to the diagnosis and management of paediatric liver diseases, highlighting the importance of multidisciplinary team working and holistic management of the child and family. This fully revised edition has also been updated to cover recent advances in paediatric hepatology. It includes new chapters describing the effects of liver disease in pregnancy on mother and child through to adolescence. With increasing numbers of young people surviving into adult life this edition addresses the importance of managing adolescent transition effectively. Trainees, practising paediatric gastroenterologists and hepatologists will welcome the practical approach outlined in this text, while other healthcare professionals involved in the management of liver disease in children will find it an accessible and comprehensive reference.

Paediatric Symptom Sorter presents likely diagnoses, clinical pathways, tips and warnings for 97 symptoms common in childhood and will prove valuable to new and experienced clinicians alike.

INFERTILITY, diagnosis

Infertility / edited by Emre Seli.
Help your patients through the maze of infertility treatments. Infertility is suffered by around 1 in 7 couples and can be a source of confusion for both partners, providing high stress on relationships. 25% of cases are explained through male infertility, 50% through female infertility, whilst 25% are generally unexplained. The possible causes and solutions are many and complex. Infertility, one of the first in the new Gynecology in Practice series, assists gynecologists and family practitioners to better care for their patients who have trouble conceiving. The authors provide a strong focus on effective diagnosis and management. Following a review of the factors that affect fertility, Infertility takes a practical approach to: Evaluation of fertility Management and treatment Complications Pre-implantation screening Fertility preservation Gynecology in Practice The Gynecology in Practice series provides clinical 'in the office' or 'at the bedside' guides to effective patient care for gynecologists. The tone is practical, not academic, with authors offering guidance on what might be done and what should be avoided. The books are informed by evidence-based practice and feature: Algorithms and guidelines where they are appropriate 'Tips and Tricks' boxes - hints on improving outcomes 'Caution' warning boxes - hints on avoiding complications 'Science Revisited' - quick reminder of the basic science principles Summaries of key evidence and suggestions for further reading.

INFORMED CONSENT, ethics

The literature on informed consent and its ethico-legal significance in clinical practice has grown rapidly in recent years. This unique book offers a practical description of the principles of informed consent and their application in daily clinical practice. Written by a team of experts in medical ethics and law, the chapters use a case-based approach to elucidate the essence of consent and highlight the ways in which individual patients and diverse situations can shape and even challenge the fundamental principles of informed consent. A range of situations in both primary and secondary care are covered and the content is arranged conceptually to help emphasise certain recurrent and related themes. An informative and rigorous yet accessible text, Informed Consent: A Primer for Clinical Practice is an essential resource for healthcare professionals working in all medical fields.

INTENSIVE CARE

An understanding of critical care is one of the key objectives of medical and surgical training, and viva examinations in particular remain a source of anxiety for many candidates. Surgical Critical Care Vivas follows the same format as the hugely popular General Pathology Vivas and gives candidates a means of practising some of the most common questions that they will be asked in their viva examinations. Pocket-sized, for portability, and packed with useful information in an east-to-use A-Z format, this book will help the reader to broaden their knowledge base and, by practising the vivas, gain confidence in their examination technique.

Anaesthesia, intensive care, and pain management for the cancer patient / edited by Paul

WO 18.2 KAN

QZ 266 FAR
Farquhar-Smith [and] Tim Wigmore.
One in three people will develop some kind of cancer in their lifetime. The overall cancer incidence has increased by 25% since 1975 and with anaesthetic involvement in hospital interactions estimated at around 75%, anaesthetists have major input into the care of the cancer patient. This input may start with the preoperative assessment and operation, but often extends to the intensive-care unit and the management of pain resulting from either the disease or from treatment interventions. This book is comprised of four main sections dealing with: cancer per se, anaesthesia for cancer surgery, intensive care, and pain management. The chapters are authored by acknowledged specialists in their field and are designed to break down what is often a complex area into comprehensible principles for treatment and management for the non-specialist. The anaesthesia section discusses not just major surgery but includes the specific and subtle differences that exist in the diverse types of specialist cancer surgery. The chapters related to pain deal with the current status of several specific cancer pain problems with contemporary evidence, recent developments in management, and novel ways of looking at conventional treatments such as the genetic aspects of opioid use.

Foundation Programme: 250 SJTs for foundation year entry / [by] Olivier Picard, Gail Allsop [and] Lydia Campbell.
With over 250 SJT (Situational Judgement Tests) practice questions, and in-depth explanations spanning over 500 pages, this book is an ideal preparation tool for the Foundation Programme entry exam for entry in Foundation Year 1 (FY1). Written by doctors and people involved in writing and testing the actual exam questions.

Oxford Assess and Progress: Situational Judgement Test is THE definitive guide for students preparing to sit the new Situational Judgement Test for entry into the UK Foundation Programme. This authoritative book, mapped to the foundation programme curriculum and GMC guidance, includes over 230 practice questions to help readers maximize their SJT score. All scenarios are based on real experiences informed by over 40 doctors and closely mirror questions expected to appear in the SJT. Detailed explanations are provided for each answer based on established professional guidance. These help readers internalise the attitudes and values required of junior doctors which are not always taught explicitly at medical school. Written by junior doctors and overseen by experts in medical assessment, this authoritative guide is aimed at students wanting to achieve the best possible score and take control of the first stage of their medical careers.

Hepatology is an important specialty with diseases and complications related to viral hepatitis and alcohol being the main reason for seeking specialist advice. On most general medical rotations and on most surgical wards there are patients with hepatological problems. Hepatology: Clinical Cases Uncovered contains clinical presentations with real-life patient cases and outcomes as seen on the wards and in exams, and leads students through a practical approach to diagnosis and management of hepatological disease. Following a question and answer approach, including self-assessment material and a 'refresher' section on the basic science, Hepatology: Clinical Cases Uncovered features investigations and the treatment options available for patients presenting with hepatological problems. Difficult concepts are clarified and relevant links are made between patholgy and clinical presentation. Hepatology: Clinical Cases Uncovered is ideal for medical students, junior doctors on the Foundation Programme, GP trainees, residents, specialist nurses and nurse practitioners. The book is also an ideal refresher for hepatology or gastroenterology trainees at the beginning of their specialist training programme.

Following a Tradition of Excellence from reviews of previous editions: "the best source of synthesized clinical wisdom" - Gastroenterology "a tour de force in terms of knowledge and effort" - The New England Journal of Medicine "the foremost liver book in the world" - The Journal of the American Medical Association "beautifully produced" - Hepatology Over the past 56 years, thousands of physicians have depended on Diseases of the Liver and Biliary System. Its didactic and reliable clinical guidance was - and still is - beyond comparison. This brand-new edition, now named Sherlock's Diseases of the Liver and Biliary System, after the late Professor Dame Sheila Sherlock, continues to provide concise clinical guidance for all those treating patients with hepato-biliary disease. Enabling clinicians to formulate incisive diagnoses and appropriate treatment strategies, this book has been updated to reflect the advances that have been made in the last 10 years, providing didactic and reliable clinical guidance in hepatology from the world's leading experts. A consistent chapter structure allows readers to access the information immediately, with summary boxes and key learning points throughout, and special emphasis on the latest in evidence-based clinical guidance. And for the first time, this edition now offers a free companion website providing the 680 full-color illustrations and figures in the book, for use in scientific presentations.

MICROBIOLOGICAL TECHNIQUES

Medical microbiology / [by] Myra Wilkinson with contributions from Ron Cutler.
Banbury: Scion, 2011.
Medical Microbiology is written specifically for those working in the biomedical sciences: * undergraduate students looking for a concise textbook covering the basic principles * all those undergoing laboratory training * qualified staff looking to keep up-to-date Uniquely, the book is structured to follow the flow of specimens through a typical clinical microbiology laboratory, and so provides a practical guide to a working medical microbiology unit. The book begins by covering: * classification and nomenclature of microorganisms and viruses associated with human disease, including an indication of which are common and which are not * pathology of disease and host defences * basic microscopy, general aseptic and culture techniques, and identification methods including all the latest molecular techniques. It goes on to describe: * the organization of a typical microbiology lab * the practical isolation of pathogens from the complete range of human specimens, including urine, faeces, blood cultures, wound swabs, ENT samples, etc. - all chapters feature a standard presentation covering specimen collection and transport, principal pathogens, laboratory analysis/diagnosis, and antibiotic susceptibility testing. The book concludes by considering: * mycology * food and water microbiology Medical Microbiology concentrates on practical diagnostics using the latest laboratory methods, with health and safety guidance linked to COSHH and standard operating procedures. The book should therefore be read by all those working, or training to work in a medical microbiology lab.

Medical Microbiology is written specifically for those working in the biomedical sciences: * undergraduate students looking for a concise textbook covering the basic principles * all those undergoing laboratory training * qualified staff looking to keep up-to-date Uniquely, the book is structured to follow the flow of specimens through a typical clinical microbiology laboratory, and so provides a practical guide to a working medical microbiology unit. The book begins by covering: * classification and nomenclature of microorganisms and viruses associated with human disease, including an indication of which are common and which are not * pathology of disease and host defences * basic microscopy, general aseptic and culture techniques, and identification methods including all the latest molecular techniques. It goes on to describe: * the organization of a typical microbiology lab * the practical isolation of pathogens from the complete range of human specimens, including urine, faeces, blood cultures, wound swabs, ENT samples, etc. - all chapters feature a standard presentation covering specimen collection and transport, principal pathogens, laboratory analysis/diagnosis, and antibiotic susceptibility testing. The book concludes by considering: * mycology * food and water microbiology Medical Microbiology concentrates on practical diagnostics using the latest laboratory methods, with health and safety guidance linked to COSHH and standard operating procedures. The book should therefore be read by all those working, or training to work in a medical microbiology lab.

Medical Microbiology and Infection Lecture Notes is ideal for medical students, junior doctors, pharmacy students, junior pharmacists, nurses, and those training in the allied health professions. It presents a thorough introduction and overview of this core subject area, and has been fully revised and updated to include: Chapters written by leading experts reflecting current research and teaching practice New chapters covering Diagnosis of Infections and Epidemiology and Prevention & Management of Infections Integrated full-colour illustrations and clinical images A self-assessment section to test understanding Whether you need to develop your knowledge for clinical practice, or refresh that knowledge in the run up to examinations, Medical Microbiology and Infection Lecture Notes will help foster a systematic approach to the clinical situation for all medical students and hospital doctors.
"Master Medicine: Microbiology and Infection" is brief and accessible, approached from the point of view of what you will need to know in order to understand the clinical work you will eventually be doing. It includes a wide range of self-assessment material, ideal for testing your understanding, and helping you to prepare for your exams.

**MIDWIFERY**

Midwifery survival guide / [edited] by Jacqui Williams.  
This new edition follows Q&A format that has made the series so popular for its practical, clinical approach. It will serve as a quick referral guide for newly qualified midwives and be an aide memoire in practice settings. The design will enable readers to easily access the information in a format which is easy to read. It presents current guidelines and best evidence. Final year student midwives have a plethora of activities and assessments to be able to complete their diploma/degree courses and qualify as midwives. Following the commencement of their first employment they have to meet various Trust requirements and complete a number of key activities to orientate to their new role. This is an intensive time of study and adjustment to new roles so a text which could support these processes will be invaluable. This book could also be used.

NEOPLASMS, therapy

One in three people will develop some kind of cancer in their lifetime. The overall cancer incidence has increased by 25% since 1975 and with anaesthetic involvement in hospital interactions estimated at around 75%, anaesthetists have major input into the care of the cancer patient. This input may start with the preoperative assessment and operation, but often extends to the intensive-care unit and the management of pain resulting from either the disease or from treatment interventions. This book is comprised of four main sections dealing with: cancer per se, anaesthesia for cancer surgery, intensive care, and pain management. The chapters are authored by acknowledged specialists in their field and are designed to break down what is often a complex area into comprehensible principles for treatment and management for the non-specialist. The anaesthesia section discusses not just major surgery but includes the specific and subtle differences that exist in the diverse types of specialist cancer surgery. The chapters related to pain deal with the current status of several specific cancer pain problems with contemporary evidence, recent developments in management, and novel ways of looking at conventional treatments such as the genetic aspects of opioid use.

NERVE BLOCK, methods

This book is the first and definitive reference in the growing field of ultrasonography in pain medicine. Each chapter details all you need to know to perform a specific block. Comparative anatomy and sonoanatomy of the various soft tissues are featured, and tips and tricks for correct placement of the ultrasound probe and administration of the injection are described in detail. All the major peripheral nerve blocks are discussed as well as the various injections of the spine, pelvis, and musculoskeletal system.

NURSE-PATIENT RELATIONS

Introduction to psychology for health carers / [by] Julia Russell.
This book provides an accessible introduction to psychological research and theory, relating these to healthcare experiences and practice. It explains how psychological theories can be used to interpret, explain and actively influence a student's own experience of and practice in, everyday contexts. It is written by an experienced author and lecturer in psychology and health care who understands the needs of students across the disciplines.

The concept of 'person-centredness' has become established in approaches to the delivery of healthcare, particularly with nursing, and is embedded in many international healthcare policy frameworks and strategic plans. This book
explores person-centred nursing using a framework that has been derived from research and practice. Person-Centred Nursing is a theoretically rigorous and practically applied text that aims to increase nurses' understanding of the principles and practices of person-centred nursing in a multiprofessional context. It aims to advance new understandings of person-centred nursing concepts and theories through the presentation of an inductively derived and tested framework for person-centred nursing. In addition, it explores a variety of strategies for developing person-centred nursing and presents case examples of the concept in action. This is a practical resource for all nurses who want to develop person-centred ways of working.

NURSE’S ROLE

This is an accessible guide aimed at student nurses, introducing them, and guiding them through the Nursing and Midwifery Council's approved programmes of education for Registered Nurse status. Every programme of study that prepares a student to become a proficient registered nurse must be approved by the NMC and adhere to its standards and guidelines. The book is broken into four sections based on the four proficiencies stated by the NMC: Professional and Ethical Practice; Care Delivery; Care Management and Personal and Professional Development. It presents these proficiencies in an easy to understand and implement way, making it easily accessible for both students, and registered nurses who will find it a useful reference for their work and development.

It is written by an experienced author and lecturer in psychology and health care who understands the needs of students across the disciplines.

This book has a distinctive clear route from a cell to the complex human being. Beginning with cells and systems, it progresses to the cooperative activity of systems working together to maintain the internal environment; then to the predictable system responses to disturbance of the environment by injury and illness. This is extended to the application of the theory to the principles of selected therapies. The human is viewed not just as a whole body, but as a whole person, from conception to death; hearing, seeing, communicating and interacting with the external environment. Sufficient anatomy is included to allow the reader to navigate the systems easily and relate function to structure. In addition to the new material on routinely assessed homeostatic parameters such as fluid and electrolytes, new sections are included on the principles of how drugs work, the characteristics which distinguish different types of wound dressing and current recommendations in palliative care. Theory is related to application throughout, by clinical scenario questions and the use of dysfunction to illustrate normal function. Text boxes contributed by nursing and other health care practitioners extend the application of theory into more practical aspects.

Writing for Publication in Nursing and Healthcare is an invaluable guide to 'getting it right', focusing on all aspects of writing for publication. It will help the reader to develop skills in writing articles, book reviews and other forms of publications, and can also be used as an aide-memoir for editors and journal/book reviewers. It explores: How to get started How to write various forms of publication including abstracts, papers, book reviews, journal articles and books Good practice in reviewing The editorial process Ethical and legal aspects of publishing Offering guidance, tips, examples and activities, this practical 'how-to' book written by experts in the field will be essential reading for all nurses and health care professionals.

NURSING FUNDAMENTALS: CARING AND CLINICAL DECISION MAKING, International Edition offers a wellness centered, balanced approach to the practice of nursing. Nursing Practice and Health Care is an essential companion to pre-registration nursing education programmes, for those studying at degree and diploma level, and for students on post-registration courses. This fifth edition has been completely revised to reflect the current professional and educational requirements for those preparing for registration as a nurse, while maintaining a strong focus on practice and reflecting the needs of those requiring nursing and health care. Additionally, it uses the 2008 NMC Code as the cornerstone for many of its chapters. Building on the changes in the fourth edition, the requirements of pre-registration nursing programmes, the fitness for practice initiative and other developments in health policy within the four countries of the UK, the book provides an invaluable support for students as they learn the skills in critical thinking that will enable the development of an accountable, professional practitioner. Both student- and patient-centred, the book is divided into five parts: Perspectives on nursing, Learning nursing, Practicing nursing, Key aspects of care and Professional support and development. Key features: Completely revised and updated to reflect the new NMC Code Both student- and patient-centred Tackles key issues for today's student nurse, including health promotion, quality and the patient experience, informatics, diversity of care settings, accountable practice and ethics and the law Incorporates a wide range of helpful text features including learning objectives, section and chapter summaries, patient scenarios and reflective points, useful websites and further reading Reflects the
governmental reports, policies, frameworks and targets of all four UK countries.

Children's nurses are faced with unique challenges when undertaking clinical skills, adapting their knowledge and practice for the physical and developmental age of their patients. The Oxford Handbook of Clinical Skills for Children's and Young People's Nursing is a practical guide to both the most basic and the increasingly complex elements of caring for the health needs of children and young people. Focusing on the key principles underpinning all elements of care, it provides a solid, evidence-based framework which practitioners can use to develop their clinical knowledge, skills, and attitudes. It systematically covers the body systems and the clinical skills relating to them, and includes additional tips and suggested courses of action when encountering difficulties with a procedure, with practical advice from current practitioners. Written by experienced children's nurses working either within clinical paediatric settings or as educators in the field, this handbook is an essential, quick, and reliable practice reference tool for any clinical setting.

**Principles of caring: a practical approach** / [by] Paula McGee.
Using her previous book, "Models of Nursing in Practice", as a starting point, the author has reworked and reversioned the content to explore and explain nursing theory with a practice-based approach.

**NURSING PROCESS**

The skills required by children's nurses are many and varied, and are undertaken in a variety of settings. Sick children are cared for at home, in children's units and hospitals, and sometimes in adult wards. In addition, children with disabilities may need nursing care while at special schools or in residential settings. This book provides a clinical manual of common practices. Each practice is research-based and presented in a common format which covers: Objectives; Rationale; Factors to note; Guidelines; Positioning; Equipment; Method; Special observations and possible complications; and, References and further reading. The guidelines have been written specifically for children's nursing by contributors from well-known children's units. They are not simply adaptations from adult practices and therefore recognise the unique differences between adult and children's nursing. The introductory section covers common concepts and infection control. There is also a chapter on complementary therapies and an appendix on the use of play as a distraction. All hospital and community nurses dealing with children, whether at home, in specialised units or in community settings, will find the book of great practical help.

PAEDIATRICS

New edition of this best-selling paediatrics textbook, translated into 8 languages and winner of BMA and RSM awards in paediatrics. Thoroughly revised and updated, this title features: new sections on child protection and global paediatrics;
100s of figures, summary boxes and clinical pictures; case studies; and, online access. From reviews of the previous edition: "This is a must have textbook for paediatrics for medical students. From what I’ve heard it’s pretty much the recommended text in most places, and for good reason! All the information you need to know is written out in simple English. The chapters focus on the important conditions within the different systems as well as other additional information that is pertinent in the field, e.g. child protection and genetics. Worth every penny and is bound to get you through exams". (R.D. (UK)). "Perfect as an introductory book to a subject that is often unlike any other in medicine. Well laid out and easy to read". (K.C. Henderson (UK)). "This is really a great textbook for paediatrics. The most powerful features are, of course, the perfect images, summary boxes and diagrams. This book is both concise and comprehensive at the same time". (D.K. Charalampopoylos (Greece)). "This is a book that was highly recommended by colleagues working in Australia and the UK. I am preparing to sit for the Australian Medical Council Exams in May 2010 and I needed something with pictures and easy to read. It’s got many pictures and I read it from cover to cover in 3 weeks! It’s a great book that I wouldn't hesitate to recommend to any doctor out there". (At Okullo (Belgium)). "This is the recommended text for paediatrics at my school, and for good reason. The text, whilst sometimes being lengthy, is well laid out, gives good explanations and goes into sufficient depth for final year undergraduate medicine and for junior doctors in this specialty. There are plenty of diagrams and break out boxes summarising key take home messages". (M. Roach (UK)). "Very good book. Lots of good summaries". (L. Marchal (France)). "This is the first paediatrics textbook that I really enjoyed. The information is very practical and useful". (Z.G. Konstantinova).

PAIN MANAGEMENT

This book is the first and definitive reference in the growing field of ultrasonography in pain medicine. Each chapter details all you need to know to perform a specific block. Comparative anatomy and sonoanatomy of the various soft tissues are featured, and tips and tricks for correct placement of the ultrasound probe and administration of the injection are described in detail. All the major peripheral nerve blocks are discussed as well as the various injections of the spine, pelvis, and musculoskeletal system.

PATHOLOGY

Aimed at students whose background in science is limited, this book employs a body-systems approach to discuss the basic concepts of anatomy and physiology, building up from simple to complex topics. It includes cartoons that use humor to make learning the content more enjoyable. It is accompanied by a Companion CD shelved at Library Office CD-ROM 13332.

Generations of medical students have been helped to pass their exams by the "Illustrated" books. The visual presentation of the subject matter, divided into one-page units, makes for easy learning and re-call. Pathology is central to the study of medicine and forms the bridge between the basic sciences and clinical medicine, making this book a key purchase.

PATIENT CARE, psychology

This book provides an accessible introduction to psychological research and theory, relating these to healthcare experiences and practice. It explains how psychological theories can be used to interpret, explain and actively influence a student's own experience of and practice in, everyday contexts. It is written by an experienced author and lecturer in psychology and health care who understands the needs of students across the disciplines.

PATIENT CARE, standards

This book is the winner of the Basis of Medicine Award in the BMA Book Medical Book Competition 2006! In many countries, during the last decade there has been a growing public realization that healthcare organisations are often dangerous places to be. Reports published in Australia, Canada, New Zealand, United Kingdom and the USA have served to focus public and policy attention on the safety of patients and to highlight the alarmingly high incidence of errors and adverse events that lead to some kind of harm or injury. This book presents a research-based perspective on patient safety, drawing together the most recent ideas and thinking from researchers on how to research and understand patient safety issues, and how research findings are used to shape policy and practice. The book examines key issues, including: analysis and measurement of patient safety; approaches to improving patient safety; future policy and practice regarding patient safety; and, the legal dimensions of patient safety. "Patient Safety" is essential reading for researchers, policy makers and practitioners involved in, or interested in, patient safety. The book is also of interest to the growing number of postgraduate students on health policy and health management programmes that focus upon healthcare quality, risk management and patient safety. Contributors include: Sally Adams, Tony Avery, Maureen Baker, Paul Beatty, Ruth Boaden, Tanya Claridge, Gary Cook, Caroline Davy, Susan Dovey, Aneez Esmail, Rachel Finn, Martin Fletcher, Sally Giles, John Hickner, Rachel Howard, Amanda Howe, Michael A. Jones, Sue Kirk, Rebecca Lawton, Martin Marshall, Caroline Morris, Dianne Parker, Shirley Pearce, Bob Phillips, Steve Rogers, Richard Thomson, Charles Vincent, Kieran Walshe, Justin Waring, Alison Watkin, Fiona Watts, Liz West, and, Maria Woloshynowych.

Plus, USMLE-style review questions and additional learning tools online make this the perfect resource to turn to for a full understanding of key concepts in pharmacology.

PHYSICIAN-PATIENT RELATIONS

The literature on informed consent and its ethico-legal significance in clinical practice has grown rapidly in recent years. This unique book offers a practical description of the principles of informed consent and their application in daily clinical practice. Written by a team of experts in medical ethics and law, the chapters use a case-based approach to elucidate the essence of consent and highlight the ways in which individual patients and diverse situations can shape and even challenge the fundamental principles of informed consent. A range of situations in both primary and secondary care are covered and the content is arranged conceptually to help emphasise certain recurrent and related themes. An informative and rigorous yet accessible text, Informed Consent: A Primer for Clinical Practice is an essential resource for healthcare professionals working in all medical fields.

PRIMARY HEALTH CARE

Advanced health assessment and clinical diagnosis in primary care - 4th ed. / [by] Joyce E. Dains, Linda Gofu Baumann [and] Pamela Scheibel. St Louis, MO: Elsevier Mosby, 2012. Designed for advanced practice nurses and advanced practice nursing students, as well as Physician's Assistant students and practitioners, "Advanced Health Assessment & Clinical Diagnosis in Primary Care, 4th Edition", is a practical resource that takes you to the 'next step' of health assessment, beyond basic history and physical examination and through the diagnostic reasoning process. Accessible and concise, it approaches physical examination by focusing on a specific chief complaint rather than a diagnosis of a disease entity. Each chapter is organized into four major areas: Focused History; Focused Physical Examination; Laboratory and Diagnostic Studies; and, Differential Diagnosis. Those who master the diagnostic reasoning process in this text will be able to accurately diagnose the majority of conditions they will see in clinical practice.
PROBLEMS AND EXERCISES

You've read your textbook and your course notes. Now you need to apply your knowledge to real life clinical situations. The problem-solving approach of Core Clinical Cases guides you to think of the patient as a whole, rather than as a sequence of unconnected symptoms. With its emphasis on everyday practice strongly linked to underlying theory, the series integrates your knowledge with the realities of managing clinical problems, and provides a basis for developing sound analytical and confident decision-making skills. The core areas of undergraduate study are covered in a logical sequence of learning activities; the same questions are asked of each clinical case, followed by detailed explanatory answers. OSCE counselling cases, with related questions and answers, also feature in each section. Key concepts and important information are highlighted, and the reader-friendly layout reflects exactly the type of question you will encounter, making these volumes the perfect revision aid for all types of case-based examination. The Obstetrics and Gynaecology volume, fully revised and updated in this third edition, focuses on the following topics: * Early pregnancy problems * Pregnancy dating and fetal growth * Late pregnancy problems * Labour * Medical disorders of pregnancy * Puerperium * Abnormal uterine bleeding * Amenorrhoea and menopause * Incontinence and prolapse * Neoplasia * Discharge and pain * Infertility * Fertility control Volumes in the Core Clinical Cases series remain absolutely invaluable in the run up to clinical, written or OSCE examinations, and ideal course companions for all undergraduate medical students at various stages in their clinical training.

Hepatology is an important specialty with diseases and complications related to viral hepatitis and alcohol being the main reason for seeking specialist advice. On most general medical rotations and on most surgical wards there are patients with hepatological problems. Hepatology: Clinical Cases Uncovered contains clinical presentations with real-life patient cases and outcomes as seen on the wards and in exams, and leads students through a practical approach to diagnosis and management of hepatological disease. Following a question and answer approach, including self-assessment material and a ‘refresher’ section on the basic science, Hepatology: Clinical Cases Uncovered features investigations and the treatment options available for patients presenting with hepatological problems. Difficult concepts are clarified and relevant links are made between pathology and clinical presentation. Hepatology: Clinical Cases Uncovered is ideal for medical students, junior doctors on the Foundation Programme, GP trainees, residents, specialist nurses and nurse practitioners. The book is also an ideal refresher for hepatology or gastroenterology trainees at the beginning of their specialist training programme.

Beautifully illustrated throughout, Ophthalmology Lecture Notes concentrates on the most common eye problems that health practitioners are expected to diagnose and manage. The book begins with a brief introduction to ocular anatomy and eye examination, and then focuses on core conditions in ophthalmology. The highly structured text includes self-assessment material at the end of each chapter, as well as a series of clinical cases at the end of the book - all designed to facilitate easy access to information, making the book an ideal resource for both study and revision, while the brand new companion website at www.wiley.com/go/james/ophthalmology features all of the book’s illustrations and images. Whether you need to develop your knowledge for clinical practice, or refresh that knowledge in the run up to examinations, Ophthalmology Lecture Notes will help foster a systematic approach to the clinical situation for all medical students and hospital doctors.

PROFESSIONAL PRACTICE

Foundation Programme: 250 SJTs for foundation year entry / [by] Olivier Picard, Gail Allsop [and] Lydia Campbell.
With over 250 SJT (Situational Judgement Tests) practice questions, and in-depth explanations spanning over 500 pages, this book is an ideal preparation tool for the Foundation Programme entry exam for entry in Foundation Year 1 (FY1). Written by doctors and people involved in writing and testing the actual exam questions.

Oxford Assess and Progress: Situational Judgement Test is THE definitive guide for students preparing to sit the new Situational Judgement Test for entry into the UK Foundation Programme. This authoritative book, mapped to the foundation programme curriculum and GMC guidance, includes over 230 practice questions to help readers maximize their SJT score. This essential guide demystifies the SJT and provides a structure for identifying 'correct' answers. All scenarios are based on real experiences informed by over 40 doctors and closely mirror questions expected to appear in the SJT. Detailed explanations are provided for each answer based on established professional guidance. These help readers internalise the attitudes and values required of junior doctors which are not always taught explicitly at medical school. Written by junior doctors and overseen by experts in medical assessment, this authoritative guide is aimed at students wanting to achieve the best possible score and take control of the first stage of their medical careers.
**PSYCHOLOGY**

This book provides an accessible introduction to psychological research and theory, relating these to healthcare experiences and practice. It explains how psychological theories can be used to interpret, explain and actively influence a student's own experience of and practice in, everyday contexts. It is written by an experienced author and lecturer in psychology and health care who understands the needs of students across the disciplines.

SAFETY MANAGEMENT, organization and administration

Patient safety: research into practice / edited by Kieran Walshe and Ruth Boaden.
This book is the winner of the Basis of Medicine Award in the BMA Book Medical Book Competition 2006! In many countries, during the last decade there has been a growing public realization that healthcare organisations are often dangerous places to be. Reports published in Australia, Canada, New Zealand, United Kingdom and the USA have served to focus public and policy attention on the safety of patients and to highlight the alarmingly high incidence of errors and adverse events that lead to some kind of harm or injury. This book presents a research-based perspective on patient safety, drawing together the most recent ideas and thinking from researchers on how to research and understand patient safety issues, and how research findings are used to shape policy and practice. The book examines key issues, including: analysis and measurement of patient safety; approaches to improving patient safety; future policy and practice regarding patient safety; and, the legal dimensions of patient safety. "Patient Safety" is essential reading for researchers, policy makers and practitioners involved in, or interested in, patient safety. The book is also of interest to the growing number of postgraduate students on health policy and health management programmes that focus upon healthcare quality, risk management and patient safety. Contributors include: Sally Adams, Tony Avery, Maureen Baker, Paul Beatty, Ruth Boaden, Tanya Claridge, Gary Cook, Caroline Davy, Susan Dovey, Aneez Esmail, Rachel Finn, Martin Fletcher, Sally Giles, John Hickner, Rachel Howard, Amanda Howe, Michael A. Jones, Sue Kirk, Rebecca Lawton, Martin Marshall, Caroline Morris, Dianne Parker, Shirley Pearce, Bob Phillips, Steve Rogers, Richard Thomson, Charles Vincent, Kieran Walshe, Justin Waring, Alison Watkin, Fiona Watts, Liz West, and, Maria Woloshynowych.

With this important resource, health care leaders from the board room to the point-of-care can learn how to apply the science of safe and best practices from industry to healthcare by changing leadership practices, models of service delivery, and methods of communication.

SCOTTISH VOCATIONAL QUALIFICATIONS

This is a fully up-to-date "Candidate Handbook", written by Yvonne Nolan, with the revised evidence and assessment opportunities consumers have requested. * Features knowledge specifications continually referenced in the margin so that readers know what is being covered and can prepare for assessment. * New evidence opportunity features are clearly linked to specific performance criteria and are cross-referenced to other elements within the qualification - helping candidates to plan holistically. * Includes updated legislation and references to regulations where appropriate so that candidates and assessors have the most current information on frameworks related to the health and social care sector. * Features new information on the latest movements and trends in health and social care so that readers are aware of initiatives that may affect their working practice. * New edition also includes many updated photos to demonstrate best practice more clearly. * Includes a CD-ROM, shelved at Library Office CD-ROM 13370, containing two additional units (369 and 375) to give even greater coverage.

This CD-ROM containing two additional units (369 and 375) to give even greater coverage. It accompanies the candidate handbook with the same title shelved at WY 18.2 NOL.

**SIGNS AND SYMPTOMS**

* Paediatric symptom sorter / [by] A. Sahib El-Radhi.
Paediatric Symptom Sorter presents likely diagnoses, clinical pathways, tips and warnings for 97 symptoms common in childhood and will prove valuable to new and experienced clinicians alike.

**SKIN DISEASES**

With over 250 full colour illustrations the new 5th edition of the bestselling ABC of Dermatology covers the diagnosis and treatment of skin conditions for the non-dermatologist. It sets out the main types of clinical change that occur in and on the skin, and relates this to specific skin conditions and underlying pathological changes. It then summarises the relevant pathological processes, diagnostic features and learning points. The types of treatment are clearly differentiated - between those suitable for the patient to obtain 'off the shelf', on prescription, and in specialist units. The ABC of Dermatology provides the core knowledge of diagnosis and therapy of common conditions and the general principles of skin condition management. Including new chapters on drug rashes, connective tissue disease, skin tumours, practical procedures, laser treatments and a practical guide to dressings and bandages, this highly illustrated ABC is the perfect learning partner for GPs, GP registrars, junior doctors, medical students and primary care nurses.

**SOCIAL MEDICINE**

Culture, Health and Illness is the leading international textbook on the role of cultural and social factors in health, illness, and medical care. Since first published in 1984, it has been used in over 40 countries within universities, medical schools and nursing colleges. This new edition meets the ever-growing need for a clear starting point in understanding the clinical significance of cultural and social factors. The book addresses the complex interactions between health, illness and culture by setting out anthropological theory in a highly readable, jargon-free style and integrating this with the practice of health care using real-life examples and case histories. Fully revised throughout, the fifth edition has
expanded its coverage of topics that are challenging both the patient and the carer's understanding of health and illness: poverty and inequality of healthcare, genetics, biotechnology, the internet and health, chronic diseases, drug-resistant infections, changes in nutrition and body image, medical care of migrants, medical technology, global pandemics such as AIDS and malaria, drug and alcohol dependence, and patients' 'languages of distress', a complex topic central to the doctor-patient relationship. In today's world of increasing cultural, religious and ethnic diversity of populations, Culture, Health and Illness is essential reading for students of medicine, nursing, psychiatry, public health, health education, international health and medical anthropology, across the globe.

**STROKE**

Stroke is the most common cause of adult disability and is of increasing importance within ageing populations. This brand new title in the ABC series covers the entire patient journey, from prevention through to long-term support. It includes primary prevention and management of risk factors for stroke and secondary prevention including pharmaceutical, lifestyle and surgical intervention. The general principles of stroke rehabilitation are also addressed as well as mobility, communication and psychological problems, as is stroke in younger people. It also covers long-term support for stroke survivors and their carers. This is an invaluable and practical guide to all aspects of stroke for both health care professionals and lay audiences. It is of particular relevance to general practitioners, junior doctors, nurses and therapists working with stroke patients and their carers, and to people with stroke and their families.

**SURGERY**

An understanding of critical care is one of the key objectives of medical and surgical training, and viva examinations in particular remain a source of anxiety for many candidates. Surgical Critical Care Vivas follows the same format as the hugely popular General Pathology Vivas and gives candidates a means of practising some of the most common questions that they will be asked in their viva examinations. Pocket-sized, for portability, and packed with useful information in an east-to-use A-Z format, this book will help the reader to broaden their knowledge base and, by practising the vivas, gain confidence in their examination technique.

**SURGICAL PROCEDURES, OPERATIVE**

This textbook is an introduction and guide to undergraduate surgery. It has been a bestseller since its first edition in 2001. The philosophy of this book is to focus on the level of knowledge and the approach that would be expected of the better students reaching the end of their undergraduate training. Avoiding a book that is too cumbersome, we have tried to make this book readable and enjoyable as well as using various techniques to help the reader remember key facts. In addition to general surgery, the book contains sections on trauma, orthopaedics, urology and ENT making it the only comprehensive textbook for medical students wishing to learn top tips in surgery. Subjects that are poorly covered in all
the main texts are dealt with in a tutorial fashion in this book, such as fluid balance management and minor surgical procedures and there is a section on how to problem solve even in the context of areas unknown to the student. This book is useful for medical students and also for junior doctors during their day to day working lives as well as those coming up to postgraduate exams. The text has been deliberately written in a tutorial-like story format as opposed to a set of lists, since this makes it easier to understand and remember. Each chapter is written by an authoritative author alongside the book editors who have ensured it remains in the spirit of the bestselling previous editions.

SURVIVAL

This compelling book is essential reading for all those involved with risk management, disaster planning and security and safety management. The third edition includes a new introductory chapter that demonstrates on a theoretical and practical level a number of reasons why individuals and groups of people fail to learn from disasters in the first place. The book offers an important insight into the way organisations implement policies, systems and procedures to prevent future disasters occurring. The message is very clear: where organisations fail to learn from disasters, history is likely to repeat itself.

TEACHING, methods

This student friendly practical guide helps you get to grips with reflective practice in teaching, through bite-sized sections that are informative and quickly digestible. The book clearly explains some of the best-known theories on reflective practice and then shows how reflection on and in practice can have a positive impact on classroom performance. The very real problems faced by beginning teachers are brought to life through the use of rich case studies as well as extracts drawn from the reflective journals of those starting their teaching career. The illustrative case studies consider how reflective practice can inform your teaching practice, including: Preparing for teaching Fitting into your school Designing lessons Managing behaviour Planning for creativity Assessing effectively Developing essential teaching techniques Working effectively with your mentor Extending your professional practice at Master’s level An additional feature of the book is the inclusion of a number of new suggestions for developing reflective practice based on the authors’ experience of training new teachers and supporting beginning teachers. Through reflective tasks based on the real problems that beginning teachers face you can actively develop your understanding and confidence in this area. This book is essential reading for trainees and newly qualified teachers as well as those supporting new entrants to the profession. Contributors: Linda Devlin, Mary Dunne, Vanessa Dye, Mahmoud Emira, Angela Gault, Fay Glendenning, Gerald Griggs, Paul Gurton, Dot Heslop, Lesley Mycroft, Sarah Powell, Lorraine Thomas, Julia Wilde.

THORACIC DISEASES, surgery

Thoracic anaesthesia is regarded as a post fellowship sub-speciality within anaesthesia, and can be daunting. This handbook provides an easily accessible, informative, and palatable guide to this often complex subject. The text is subdivided into basic sciences, pre-operative assessment, diagnostic procedures, and an anaesthetist’s walk-through of key thoracic surgical procedures. It concludes with an emergency section covering thoracic anaesthesia emergencies, critical care, and the thoracic surgical patient, and ends with essential guidance on the relevant practical procedures necessary to manage cases. The text provides an essential reference for the core curriculum of the Fellowship of the Royal College of Anaesthetists and for the day-to-day practice of post fellowship anaesthetists alike. The discussions of the surgical procedures are simple, highlighting the poignant stages that can affect the anaesthetic management of the patient. The authors use the very latest evidence in order to keep the reader up to speed with developments in the field. Whether on-call, running day-to-day lists or working within critical care, this indispensable guidebook will optimise the preparedness of all staff in dealing with any case, whether simple or complex.
